

Contribution Evaluation of Team Work
Group Name/Number: Team QNX

Please describe role, tasks, and overall contribution of all team members in the table below.

If all members work well together with equivalently contributed works, then the contribution should be equally divided (e.g. 25% for each member if this is group of 4, or 33.3% for group of 3, etc..). Otherwise, please discuss within your group to record the actual contributions of all members (e.g. a slightly higher percentage for people with more contribution and vice versa).

Before submitting this form, the contribution assessment must be discussed and agreed upon by all team members.

Note: the contribution should be considered in overall in terms of **initiative** (help managing the project, contribute excellent ideas), **amount of work**, **quality of work**, and **support for other members**, etc.

All Team Members	Role and Task Given	Individual Contribution (%)
1. Tran Dong Nghi	Lead Intersection Validation & Project Management: Verified the Intersection Core FSM, traffic demand/operating modes, pedestrian logic, and railway-to-intersection safety interlocks. Executed the Traffic & Pedestrian test suite and conducted full-system regression testing. Synchronized architecture documentation and managed the final official submission. Documentation: Authored Implementation Note Sections 3 (Implemented System Architecture), 8 (Verification and Test Results), and 9 (Conclusion).	33.3
2. Le Hung	Lead Railway & Safety/Fault Validation: Verified the Railway Crossing FSM, hardware fault/fail-safe behaviors, and watchdog safe-state recovery mechanisms. Executed the Railway, Closure, and Fault Scenario test suite, and captured all final operational test and recovery evidence. Managed the final source candidate readiness. Documentation: Authored Implementation Note Sections 4 (Inter-Process Communication) and 7 (Implemented Features and Operational Evidence).	33.3
3. Hoang Minh Thang	Lead QNX Foundation & Central Validation: Verified the core QNX project structure, shared build configurations, <i>Qnet</i> distributed networking, and IPC contracts. Led the validation of Central monitoring, configuration, clear-route overrides, and <i>DEGRADED_LOCAL</i> reconnection paths. Executed Central and Resilience test scenarios and prepared the final demo workflow and clean build. Documentation: Authored Implementation Note Sections 1 (Overview), 2 (Build, Deployment, and Operation), and 5 (Source-Code Organization), and finalized overall document formatting.	33.3

Team Contribution Agreement: All three team members have discussed and agreed that the overall contribution to this project is equivalent. While individual responsibilities and supporting activities differed across sections, the team mutually agrees to **an equal contribution of 33.3% per member** and **to receive equal assessment credit** for the submitted work.

COMMENTS: On this page, please provide any specific comments for characterizing the contributions.
